

RTLS

CarePlus™ utilises RTLS (Real-Time Location System) technology to provide the best safety solutions for the medical industry. RTLS is an advanced and innovative technology automatically identifying and tracking the location of assets and/or people in real time. Clinical grade, room accuracy location services allow for indoor and outdoor tracking within any medical facility, of any size, to help reduce capital expenditure and protect staff and/or patients and residents in dangerous situations. RTLS delivers significant opportunities to benefit administration, stakeholders, staff, patients, and their friends and families. CarePlus™ has invented three key solutions to deliver different safety results:

- CarePlus™ Mobile Staff Duress was designed to reduce risk and provide accelerated emergency response times for any staff member facing possible duress. The easy-to-use tag and scalable, wall mounted devices send instant signals for precise room locations to detect and direct.
- CarePlus™ Asset Tracking was designed to manage the location of important and costly equipment. RTLS technology aids in reducing time wastage searching for lost equipment, improves wait times for patients, enables faster bed turnaround, facilitates quick maintenance and testing, and generates significant return on investment.
- CarePlus™ Mobile Resident Call was designed to empower residents and provide extra caregiving time for staff with a portable assistance device for residents. A simple and customisable mobile call device alerts for instant help or assistance, carried via a robust lanyard to deliver comprehensive communication between residents and staff.

UK – Europe office:

Unit 9, Miller Court, 43 Station Road
Kenilworth, Warwickshire,
CV81JD, United Kingdom
