

*Modern IP Nurse Call
application for advanced
patient care*

CarePlus™
Acute Care

Why CarePlus™?

CarePlus™ Hospital is a multifunctional healthcare application, employing various technologies to advance beyond a simple Nurse Call system. The numerous challenges and obstacles presented to hospital staff is tackled by CarePlus™ Hospital in a superior and integrated technology suite for dependable patient care. Flexibility and scalability allows this CarePlus™ solution to be applicable from 30 beds to 1,000 whilst also accelerating performance response times. Mobile Staff Duress can be utilised as an added reassurance to heighten safety for all healthcare professionals.

Mobile Staff Duress works in conjunction with CarePlus™ Hospital to secure the safety of staff, and subsequently patients, within a busy hospital environment. Real Time Location Tracking (RTLS) tracks staff in duress with an easy-to-use tag for discrete activation and extra protection. The system is durable and scalable for clinical-grade room accuracy and improved operational speed and productivity. Asset tracking is another solution offering extra support to locate expensive hospital equipment to save time, resources and money.

A specialised solution offers upgraded quality, standards and safety. Everyday tasks are made easier for healthcare professionals to generate better response times, especially with a reduction in alarm broadcasting to encourage faster recovery time for patients. These benefits are all specified in a cost-effective installation and commissioning package for additional customer advantage and reduced economic strain.

CarePlus™ Improves Patient Satisfaction

CarePlus™ improves hospital workflow efficiency and call bell response time, significantly improving patient satisfaction via CarePlus™ smartphone integration with Mobile Connect.

CarePlus™ Mobile Connect is an exciting product alerting staff to nurse call alarms through an application available on Smartphones and tablets. CarePlus™ Mobile Connect offers HIPAA approved, secure, fully traceable and encrypted messaging between staff through cellular and Wi-Fi networks.

CarePlus™ Smartphone integration enables the right caregiver to receive the right message, reducing alarm broadcasting to allow a quieter and more peaceful care environment which promotes patient healing and recovery.

CarePlus™ Server:

CarePlus™ Server addresses various issues presented in all healthcare facilities by providing expert alarm management procedures. Reducing the likelihood of alarm fatigue is enabled by mobile connectivity, compatible with Apple, Android, DECT and Cisco devices. CarePlus™ Server optimises life safety messages and alarms in CarePlus™ Hospital to organise message handling and communication systems via CarePlus™ Protocol and HL7 message formats.

CarePlus™ Server prioritises and sends messages to allocated caregivers via email, paging or mobile devices according to priority. The right message is sent to the right person instantaneously through transmitted notifications and alerts. Greater staff coordination and reduced alarm broadcasting is provided via Global Staff Assignments. The software allows clinicians to receive messages from multiple areas as pertinent only to the assigned staff member to filter out non-actionable alerts. All features are scalable from a 30-bed facility to 1,000-beds. CarePlus™ Server generates significant improvements to staff concentration and patient satisfaction.

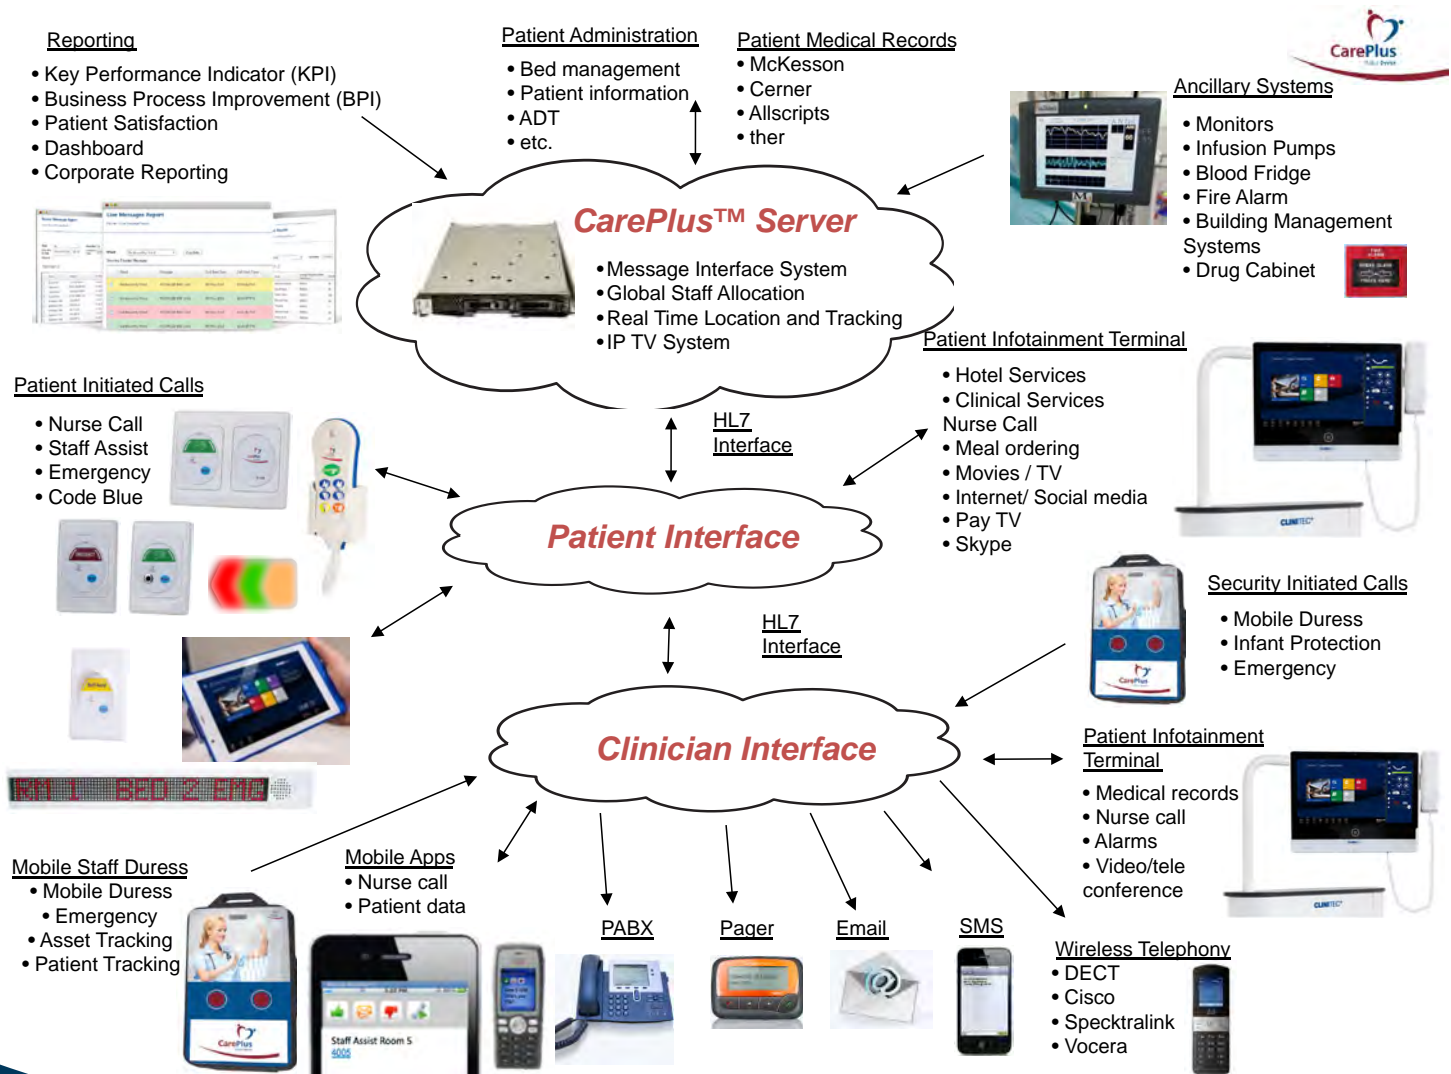

ClinicAll® Patient Infotainment Bedside Terminal:

The CarePlus™ technology suite has integrated a state-of-the-art patient care experience in collaboration with the ClinicAll® infotainment terminal. A completely assimilated Nurse Call and infotainment terminal arranges patient alarms, based on their status or acuity, to an assigned nurse's device for better management and care. Clinical and hotel services deliver greater comfort to patients as clinicians can access a patient's medical history and records on the display next to the patient's bedside to explain diagnostic results and procedures. Valuable functionality and easy communication are part of the redesigned in-room patient experience. Other hotel amenities enable direct entertainment services, such as meal ordering or discharge information, internet access, movies on demand, Foxtel, social media, and more. The ClinicAll® application helps reduce patient stress and frustration for a positive care experience, thus increasing patient and staff satisfaction.

CarePlus™ Advanced Features:

1. CarePlus™ Hospital has smart, in-built software generating secure and fully traceable messaging.
2. CarePlus™ Hospital is integrated with current wired or wireless technology, handheld devices and Mobile Staff Duress tags.
3. CarePlus™ Hospital is certified MDDS Class II, FDA and TGA, and complies with AS3811 hard-wired patient alarm systems.
4. CarePlus™ Server enables EMR software integration to CarePlus™ Hospital via the HL7 interface.
